STRATEGIC MARKET INTELLIGENCE

Real Estate Strategic Insights

22 Core Business Questions & Decision Rationales — Executive Reference Portfolio

01. Realized Deals & Actual Pricing (Asking vs. Realized Truth)

#01 • Negotiation Discount

Closing Negotiation Spread

How much discount do sellers actually give at closing?

Sellers ask for ambitious list prices, but contracts close lower. This reveals which neighborhoods and asset types force sellers into the deepest price cuts.

#02 • Conversion Rate

Deal Success & Liquidity

What percentage of listed properties actually sell?

Separates high-demand neighborhoods where inventory quickly converts to cash from stagnant zones flooded with unsold paper listings.

#03 • Sales Velocity

Market Holding Period (Days on Market)

How many days does a property take to sell from listing date to deed signing?

Measures the speed of capital turnover across property categories, highlighting where capital moves fast versus where prolonged holding costs erode profit margins.

02. Location Intelligence & Gated Compounds

#04 • Capital Concentration

Market Capitalization Imbalance

Which districts absorb most market capital despite having fewer listings?

Identifies luxury submarkets where a small percentage of listings captures an enormous portion of total market value.

#05 • Scarcity Matrix

High-Value / Low-Supply Enclaves

Where are the rare, low-competition, high-value zones?

Pinpoints micro-markets with strong price resilience and minimal available inventory, protecting investors from oversupplied buyer traps.

#06 • Compound Premium

Compound vs. Neighborhood Markup

How much extra do buyers pay inside a gated compound?

Calculates the exact per-square-meter premium that gated community security and lifestyle command over surrounding regular street neighborhoods.

#07 • Purchasing Power

Purchasing Power (SQM per 1M EGP)

How many square meters does 1 Million EGP purchase in each area?

Provides a direct affordability reality check showing how much living space an everyday buyer's budget gets across different neighborhoods.

#08 • Geographic Clusters

Geospatial Price Hotspots

Where are the natural price clusters along city highways and transit spines?

Uses GPS coordinates to uncover continuous high-value corridors near major transit lines, independent of official district borders.

03. Financing Terms, Asset Lifecycle & Specs

#09 • Financing Markup

Installment vs. Cash Premium

How much extra do installment plans cost over cash?

Measures the financing surcharge embedded in multi-year installment contracts compared to immediate upfront cash settlements.

#10 • Construction Risk

Ready vs. Off-Plan Discount

How much cheaper is buying under-construction property?

Quantifies the discount buyers demand for waiting through construction delays and taking on developer delivery risk.

#11 • Typology Match

District Product Sweet Spots

Which property type generates maximum value in each district?

Pinpoints high-yield mismatches—like high-margin standalone villas in developing suburbs or compact apartments in business districts.

#12 • Fit-Out ROI

Furnished & New Build Uplift

Is it worth furnishing a property before selling?

Checks if furnishing and delivering brand-new properties yields a true profit or if buyers prefer raw space at a lower entry price.

#13 • Area Elasticity

Floor Area vs. Price Curve

At what size does extra space stop adding proportional value?

Finds the ideal property floorplate size before oversized floorplans start reducing the price-per-square-meter sellers can charge.

#14 • Layout Design

Room Layout Efficiency

Do buyers pay more for extra rooms or sheer space?

Shows how efficient layouts with smart bedroom counts achieve higher price-per-meter than larger units with wasted hallway space.

04. Listing Quality, Media & Platform Optimization

#15 • Trust Badge ROI

Verified Badge & Promotion Impact

Do verified listings sell faster and with smaller discounts?

Evaluates whether platform trust badges and featured tier rankings protect asking prices and speed up transaction closures.

#16 • Visual Asset Depth

Photo Count Effect on Buyer Interest

How many photos does a listing need to sell successfully?

Discovers the minimum photography threshold needed to attract serious buyer inquiries and avoid listing stagnation.

#17 • Ownership Structure

Sales vs. Rental Market Split

How is market capital divided between freehold sales and rentals?

Breaks down market volume and median rates across ownership purchases, long-term annual leases, and short-term rentals.

05. Amenities Valuation & Saturation Thresholds

#18 • Saturation Point

Amenity Saturation Threshold

At what point do extra amenities stop increasing property price?

Shows that adding more than 5 or 6 amenities yields diminishing returns, helping developers avoid over-spending on communal facilities.

#19 • Amenity Ranking

Highest-Value Individual Features

Which individual features add the highest pricing premium?

Ranks individual features (like sea view, private pool, or concierge) to show which specific upgrades deliver the highest return on investment.

06. Broker Competition & Market Dominance

#20 • Broker Realized Volume

Top Closers vs. Listing Hoarders

Which brokers close real deals versus just hoarding listings?

Distinguishes active agency partners who actually convert inventory into closed sales from brokers who inflate paper listing numbers.

#21 • Territory Concentration

Broker Neighborhood Monopoly

Do specific brokers monopolize certain neighborhoods?

Exposes whether certain agencies control more than 30% of a district's listings, giving them outsized power over local pricing.

07. Temporal Cycles & Market Seasonality

#22 • Seasonal Windows

Best Months & Days for Market Launches

What months and days see peak buyer demand and prices?

Tracks annual buying waves and weekly listing rhythms so developers and sellers launch campaigns when buyer readiness is at its highest.
